Contents

1 Why Bayesian Network

2 Definitions
2.1 Node . . . . .

3 Goals
3.1 students' perspective . . . . .
3.2 company's perspective . . . . .

4 Graph Architecture
4.1 baisc definition . . . . .
4.2 how to add a node . . . . .
4.3 how to delete a node . . . . .
4.4 how to add a parent node . . . . .
4.5 how to add a child node . . . . .

5 Evaluation, Metrics

6 Inference

7 Parameters: Learning, Hand Coding

8 Scalability

9 Conclusion

1 Why Bayesian Network

To empower both data and human knowledge.

2 Definitions

2.1 Node

```
using Attributes = Dict<AttributeName,Value>;
class Node {
  NodeName   node_name;
  Node       parent;
  Nodes      childeren;
  Attributes attributes;
};
```

3 Goals

3.1 students' perspective

philosophy: Accelate learning speed. definition: At Time t1, Student s understands Concept c with a Probality p1, after a fixed period training at platform, at Time t2, Student s understands Concept c with a Probality p2,

details:

3.2 company's perspective

4 Graph Architecture

4.1 baisc definition

4.2 how to add a node

4.3 how to delete a node

4.4 how to add a parent node

4.5 how to add a child node

5 Evaluation, Metrics

6 Inference

7 Parameters: Learning, Hand Coding

8 Scalability

9 Conclusion
